## Education

**Warren Wilson College** — Swannananoa, NC
Math and Data Science — May 8th, 2027
GPA 3.71

**South Brunswick Highschool** — Southport, NC
4.0 GPA, Summa Cum Laude — June 9th, 2023

## Experience

**Warren Wilson Athletics** — Swannanoa, NC
**Digital Media Manager and Creator** — August 2023 - May 2026

Managed the information given on sports event advertisements and used graphic design skills to encourage engagement at the college's sports events. Overlooked the gymnasium, running the front desk, checking students and faculty into the gym. Set up gameday equipment and prepare paperwork and score sheets before games and meets. Aided in the statistical analysis of game outcomes for every sport. Input stats and kept record of during-game occurrences and scores. Photographed athletes at games and created engaging social media graphics, providing the public with necessary details.

## Research & Projects

**Intro to GIS** — Swannanoa, NC
**Research Project** — April 2026 - May 2026

Utilized QGIS to create several maps of safe and unsafe student walking routes on WWC campus and the recommended improvements that should be made. Independently researched OSHA standards on lighting safety and collected over 50 geographic points around campus and mapped them in a highly readable way. The main goal of this project was to bring attention to the poorly lit areas that students most commonly travel; not only to make them aware of the unsafe environment but also to encourage the college to improve those areas. Skills like data collection with Excel, conversion, buffering, and fixed geometries were used to create the visuals, and problem solving skills were used to analyze the issues and produce comprehensible results.

**Machine Learning** — Swannanoa, NC
**Research Project** — January 2026 - May 2026

Used techniques learned in Machine Learning to compare what may contribute to having a sleep disorder or high stress levels based on the "Sleep Disorder Diagnostic Dataset" . Studied how a person's lifestyle, and general health influences sleep disorders, and compares data found from the given data set, and from personal collection to make conclusions. Created visuals with ggplot, used KNN classification to create a prediction model and included predictor variables. Variable conversion, logistic regression, and techniques like "dummy variables" were also used to help draw conclusions.
